

Innovating with Mozilla Labs

The Weave Story

Problems

~~The Web~~ Life is full of them!

But

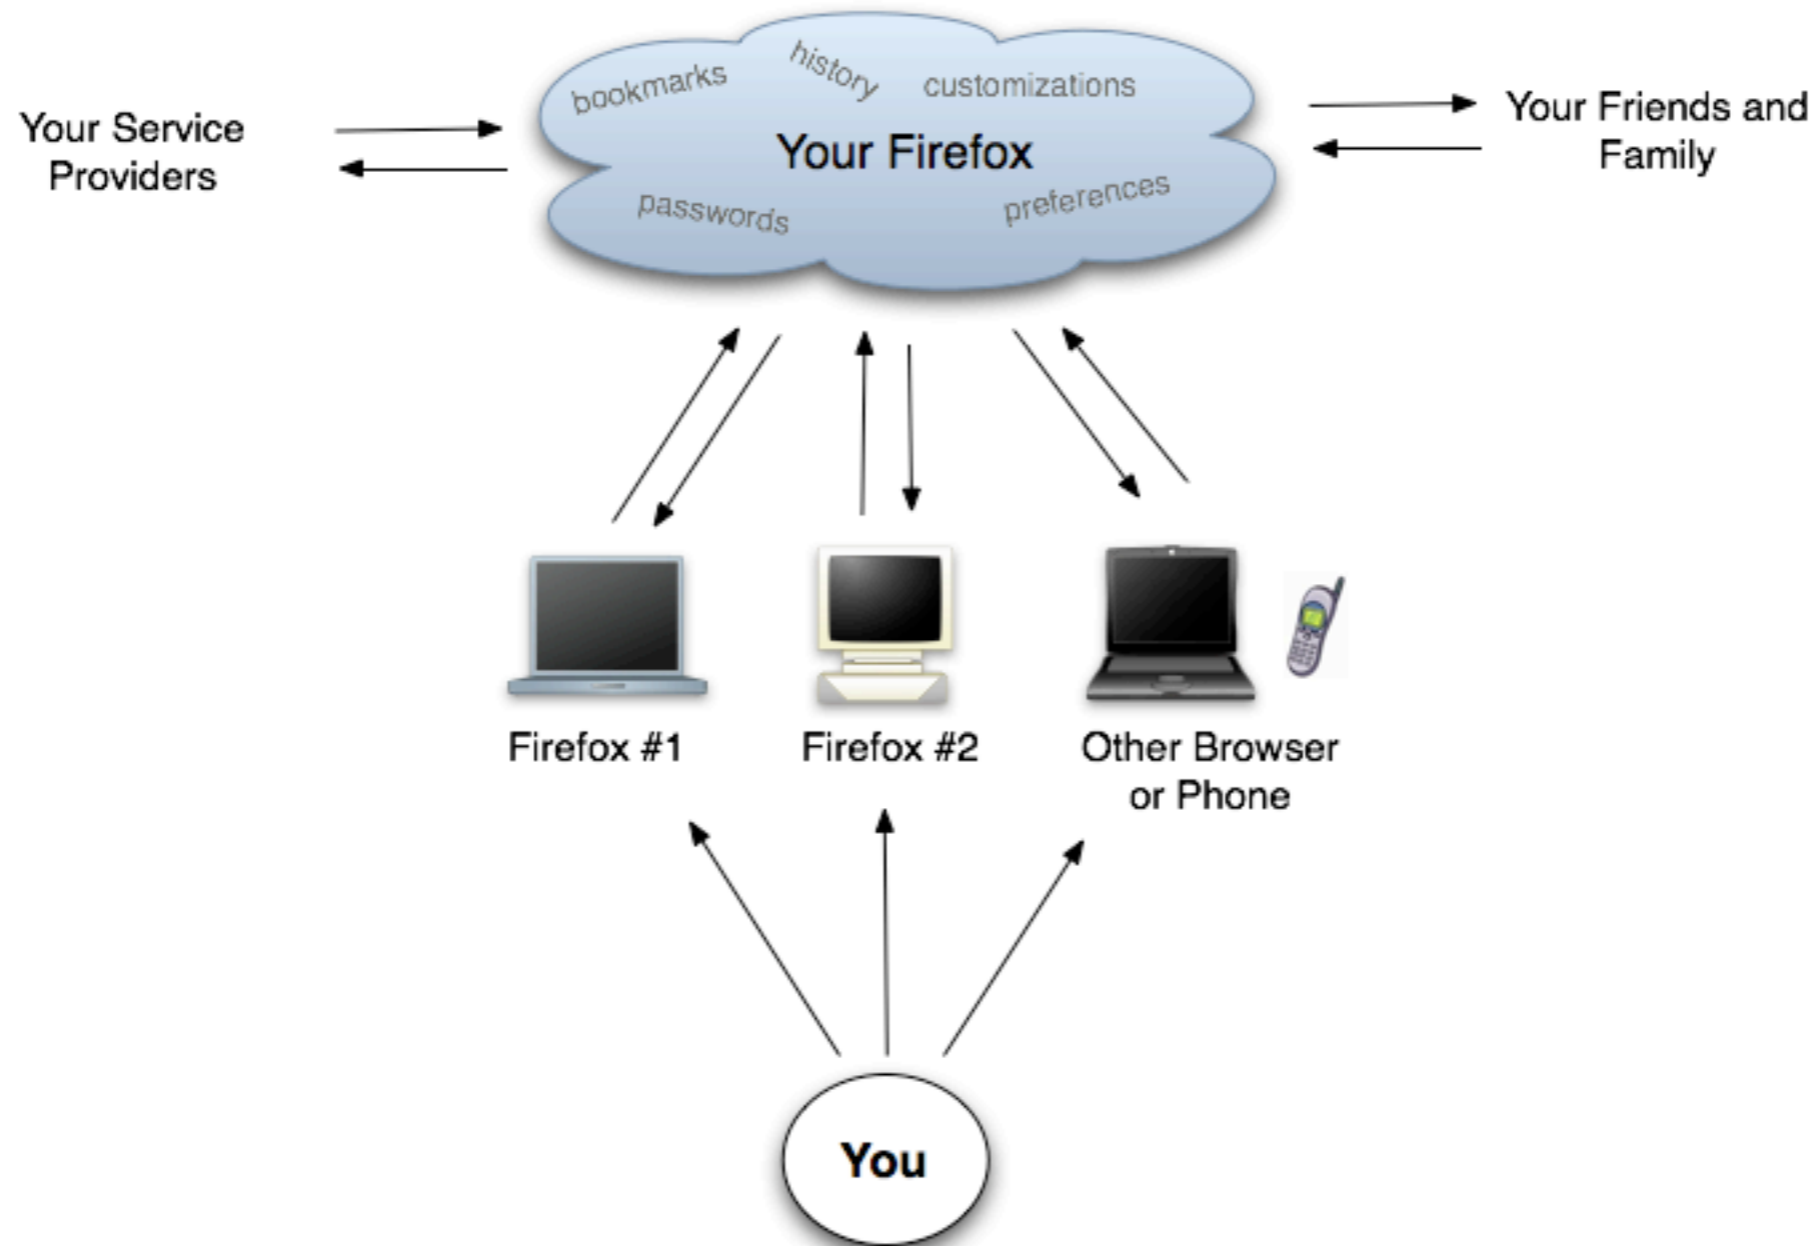

Let's take One

- You looked up a restaurant and made reservations for dinner tonight
- You get in your Car, only to realize that you forgot to note down the address
- You do have your smartphone with you

An Idea Formed!

From Idea to Code

- Firefox extension
- Written mostly in Javascript
 - Some C++ portions for cryptography
- Store browser data on “the cloud”
 - Mechanism changed for next release (0.3)
- Built as a platform to provide generic synchronization functionality

It's What We Do

Facilitate the Community

Inspire and Incubate Ideas

Provide Resources to Implement them

Projects

Concept Series

Prism

Personas

Test Pilot

Snowl

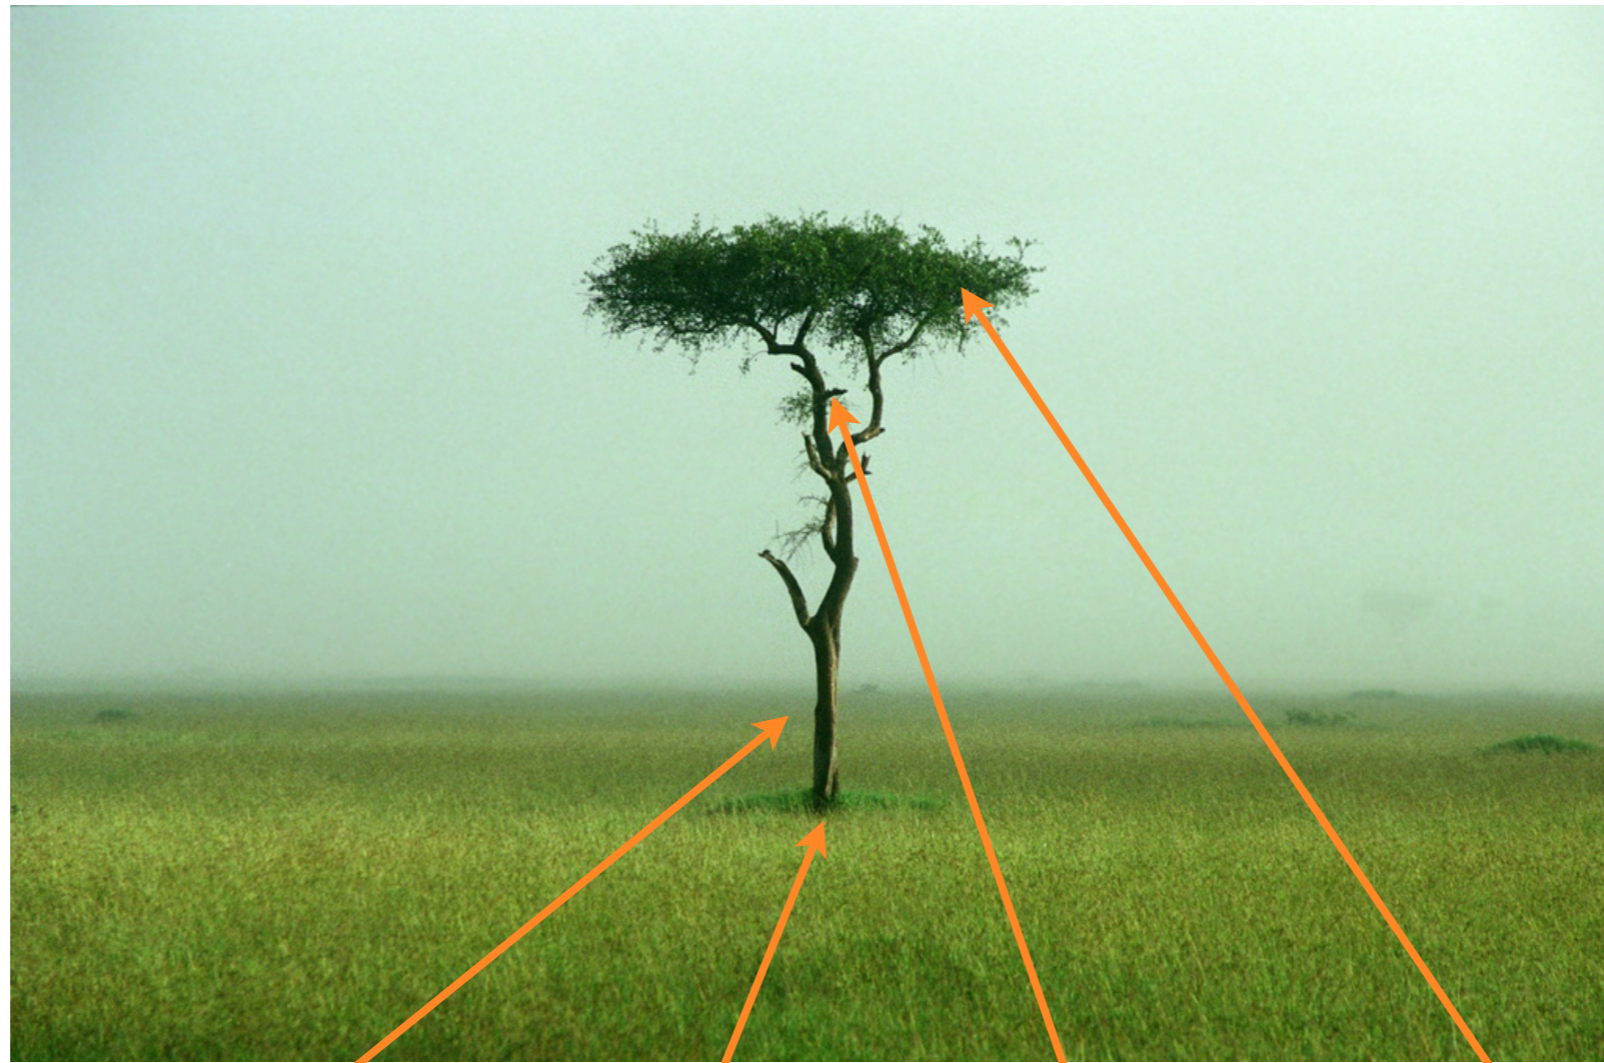

Weave

Ubiquity

How can you help?

Shade

Seed

Fruit

Branches

Code is not the only way!

- Concept series is especially targeted towards designers
- Test Pilot (will) target regular users
- Every project needs UI and Documentation :-)

But if you insist...

- Most projects use mercurial for version control
- We're experimenting with different issue tracking systems
- All development life-cycles are independent from Firefox and hence projects are typically extensions
 - Which translates to Javascript a little C++ most of the time

Potential Areas for Contribution

mozilla LABS

CONCEPT SERIES

- Meant to inspire future *design* directions for the *browser of the future*
- A *concept* can be:
 - An idea
 - A mockup
 - A prototype
- Tag as *mozconcept*

mozilla labs
weave

- Your data *follows* you

- Add a new data type? Write a new client?

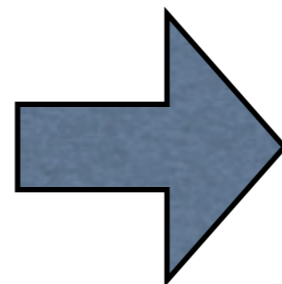

- Command line interface to your browser
- Make common tasks on the web quicker and easier to perform
- “Empower, Enable, Extend”

Come, Play!
